## Product Sheet – Gesso Fine Textured Acrylic

### Description

Gesso Acrylic is a coloured, water based acrylic wall coating containing fine silica sand among others, which gives the effect of light movement on the area.

### Preparation

All surfaces should be dry, clean, firm and free from dust, oil, grease, rust and powdery or flaking paint. Stir thoroughly with a flat paddle prior to and during use. Perform dampproofing and waterproofing treatments if necessary.

### Application

Product can be applied by brush. Apply two coats of Gesso Acrylic. Apply Gesso from corner to corner to avoid drying lines in the middle of a wall.

### Spreadrate

Approximately 4 square metres per litre per coat, depending on roughness of substrate. Due to the variance in different surfaces, spreadrates cannot be guaranteed. It is advised that a test site application be done to determine effective coverage. Either a criss-cross technique or vertical brushstrokes can also be used if the effect is required.

**Cleaning** Clean all equipment with water

**Dilution** Not recommended

### Advantages

Fills fine cracks

Flexible

Hides imperfections

Water repelling

While every care is taken that colour chips match, variations may occur due to the effect of light and aging, as well as the fact that natural ingredients are used. To ensure that colours are consistent on a project order all cans from the same batch. Terms and conditions apply.
